Laasya M. Koduru

669-246-2174 lkoduru@ucsb.edu lmkoduru.github.io Google Scholar Santa Barbara, CA 93106

Research Interests

Reliable and cost-efficient LLM and computer-use agents for large-scale web measurement, applied to data-driven broadband policy.

Education

University of California, Santa Barbara — Santa Barbara, CA
Ph.D., Computer Science — Sept 2024–Present
M.S., Computer Science — Sept 2023–Present
Advisors: Dr. Arpit Gupta, Dr. Elizabeth Belding

University of California, Santa Cruz — Santa Cruz, CA
B.S., Applied Mathematics — Sept 2020–June 2023

Technical Skills

- **Languages:** Python, C, C++, Java
- **ML/AI:** PyTorch, TensorFlow, LLM agents
- **Data, Cloud & Tools:** Apache Spark, Kubernetes, Docker, Google Cloud, AWS, Git, SQL, Selenium

Selected Publications

[1] **Laasya Koduru**, Kira Allmann, Tejas Narechania, Arpit Gupta, "From Measurement to Policy Design: A Convex Optimization Framework for Broadband Affordability", Research Conference on Communications, Information and Internet Policy (TPRC), 2026.

[2] **Laasya Koduru**, Roman Beltiukov, Alexander Nguyen, Eugene Vuong, Jaber Daneshamooz, Tejas Narechania, Elizabeth Belding, Arpit Gupta, "Robust and Extensible Measurement of Broadband Plans with BQT+", arXiv preprint, Feb 2026.

Policy Impact

- **Congressional Brief:** Provided the BQT+ data and analysis behind a briefing to congressional staff on Capitol Hill by my advisor, a UC Presidential Faculty Fellow.
- **Virginia Joint Commission on Technology and Science (JCOTS):** BQT+ data informed the affordability benchmarks in "Beyond Access: Broadband Affordability & Adoption" (co-author), Nov 2025.
- **New York City Office of Technology and Innovation (OTI):** BQT+ address-level availability and affordability analysis informed the City's Internet Access and Adoption Plan and its fiscal-impact assessment (co-author).
- **California Public Advocates Office (CalAdvocates), CPUC:** Contributed BQT pricing data to "Broadband Competition and Pricing Strategies in California's Urban Markets" (2026), whose analysis found over $1B per year in potential consumer savings.

Honors

- UC Santa Barbara Neal Fenzi Resonant Founder Fellowship — April 2026–Present
- The National GEM Consortium Ph.D. Science and Engineering Fellowship — April 2025–Present
- IETF/IRTF Applied Networking Research Prize (SIGCOMM 2024 Connect America Fund paper) — April 2025
- UC Santa Barbara Computer Science Summer Fellowship — June 2024

Experience

University of California, Santa Barbara — Santa Barbara, CA
Graduate Student Researcher — Sept 2023–Present
Systems & Networking Lab (SNL) and Mobility Management & Networking Lab (MOMENT)

- Designed BQT+, an agentic system in which frontier LLMs discover each ISP's address-checker workflow from a natural-language goal and emit a reusable workflow specification. Covers 100+ ISPs.
- Replays cached specifications across addresses at scale, with 100% agreement on 500 address–ISP pairs. Measured 56 website changes across 64 ISPs in eight months.
- Released public broadband plan data and a natural-language query interface used by Virginia JCOTS, NYC OTI, and CalAdvocates.
- Deployed BQT+ on Kubernetes in Google Cloud with autoscaling and load balancing across servers.

Idaho National Laboratory — Idaho Falls, ID
Cybersecurity Machine Learning Algorithms Intern — June–Sept 2025

- Built a bidirectional LSTM model using PyTorch and TensorFlow that separates mixed Ethernet communication signals into their original source signals, reaching 96% accuracy against a 90% baseline.
- Tuned 200+ hyperparameter configurations on INL's HPC cluster.

Projects

CVE-Genie: Automated CVE Reproduction | *Python* — Sept–Dec 2024

- Helped build an LLM multi-agent system that rebuilds, exploits, and verifies CVEs from public reports; reproduced 50 CVEs end to end, including C/C++ memory-safety bugs.

MOVERC: MongoDB Version Classifier | *Python* — April–June 2024

- Built a random forest that infers MongoDB versions (3.0–7.0) from packet headers to flag vulnerable servers, reaching 0.74 weighted F1 vs. 0.42 for a neural net baseline on a 30K-flow dataset.
